

Last week we started to learn about the life cycles of different creatures.

First:

Today I would like you to look at the Twinkl PowerPoint to learn about the life cycle of a frog.

Next:

If you can, print the frog photos out and create your own life cycle.

If you're unable to print, what about drawing simple pictures?

Don't forget to add arrows and an explanation for each stage.

Extra:

Have a go at making the frog life cycle wheel so that you could teach someone else about the cycle.
