

Remember the perimeter is when we measure around the outside of a shape.

Today I would like you to measure the perimeter of things around your house!

Perhaps you could measure the perimeter of a chopping board or a book?

How do you think you could measure the perimeter of a plate? (Hint: a piece of string might help!)

When you have measured your different things you could draw a table and record your measurements.

e.g.

<u>Object</u>	<u>Perimeter</u>
Chopping board	
Book	
TV remote	
DVD case	

Now order them shortest to longest?
